A GREAT FIRST IMPRESSION

SET THE TONE FOR YOUR DREAM HOME

Imagine your dream home. A safe space for your most precious possessions, a space for family, entertaining and unwinding. We've spent more than a decade helping people create their dream home and we know nothing short of perfect will do.

In 2007, as a father and son team we set out to build a company that made a range of high quality bi-folding doors with the power to transform people's homes forever. Since then, we've grown to become the UK's largest specialist manufacturer and installer of premium folding and sliding doors, windows, roofing products and aluminium entrance doors. Today we employ over 300 people nationwide, and our products are creating spaces to live, grow and unwind in, right across the UK.

We couldn't have achieved all this without also taking pride in delivering outstanding service, reliable delivery and a comprehensive and innovative range of quality aluminium products that can transform any home from front to back. Our distinctive range of bespoke front doors are manufactured based on these principles. A gorgeous range that suits all types of properties and can be combined with our entire product range to stunning effect.

FRONT DOORS THAT MAKE THE PERFECT INTRODUCTION

Want to make a lasting first impression?

Greet family, friends and guests with one of our expertly crafted front doors – an ideal addition to your dream home. Acting as a focal point, the front door is a key purchase. We take a design-led approach to ensure that our front doors meet your every expectation in quality, appearance and security.

We manufacture all our doors in the UK to the highest standards to guarantee you'll love your space from the very first moment.

Our Premium Entrance Doors

Expertly manufactured in-house to bespoke sizes, we fabricate our premium entrance doors and then bond both skins of the distinctive panels to both faces of the door sash to create a flush finish inside and out. After bonding we carefully store the doors and allow them to set for forty-eight hours to complete the manufacturing process. This method creates an extremely robust and secure front entrance door. Our Premium range offers the flexibility to choose the characteristics of your door through our selection of unique panel designs, huge range of colours and finishes, handle options and tailor-made sizes.

Grand Pivot Doors

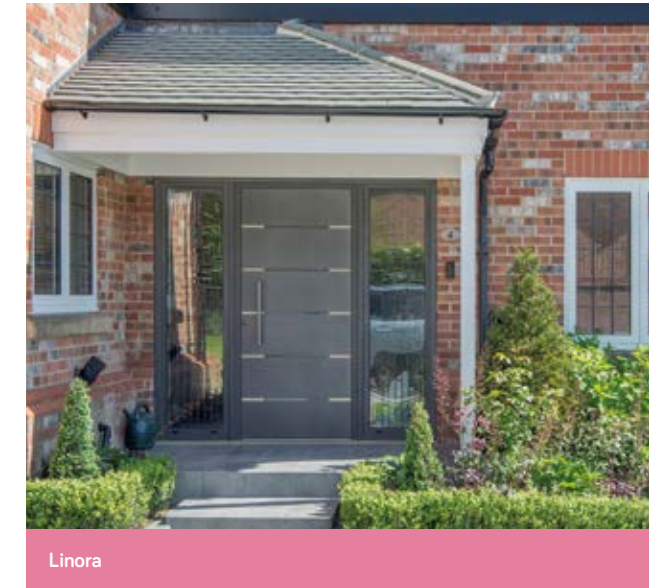

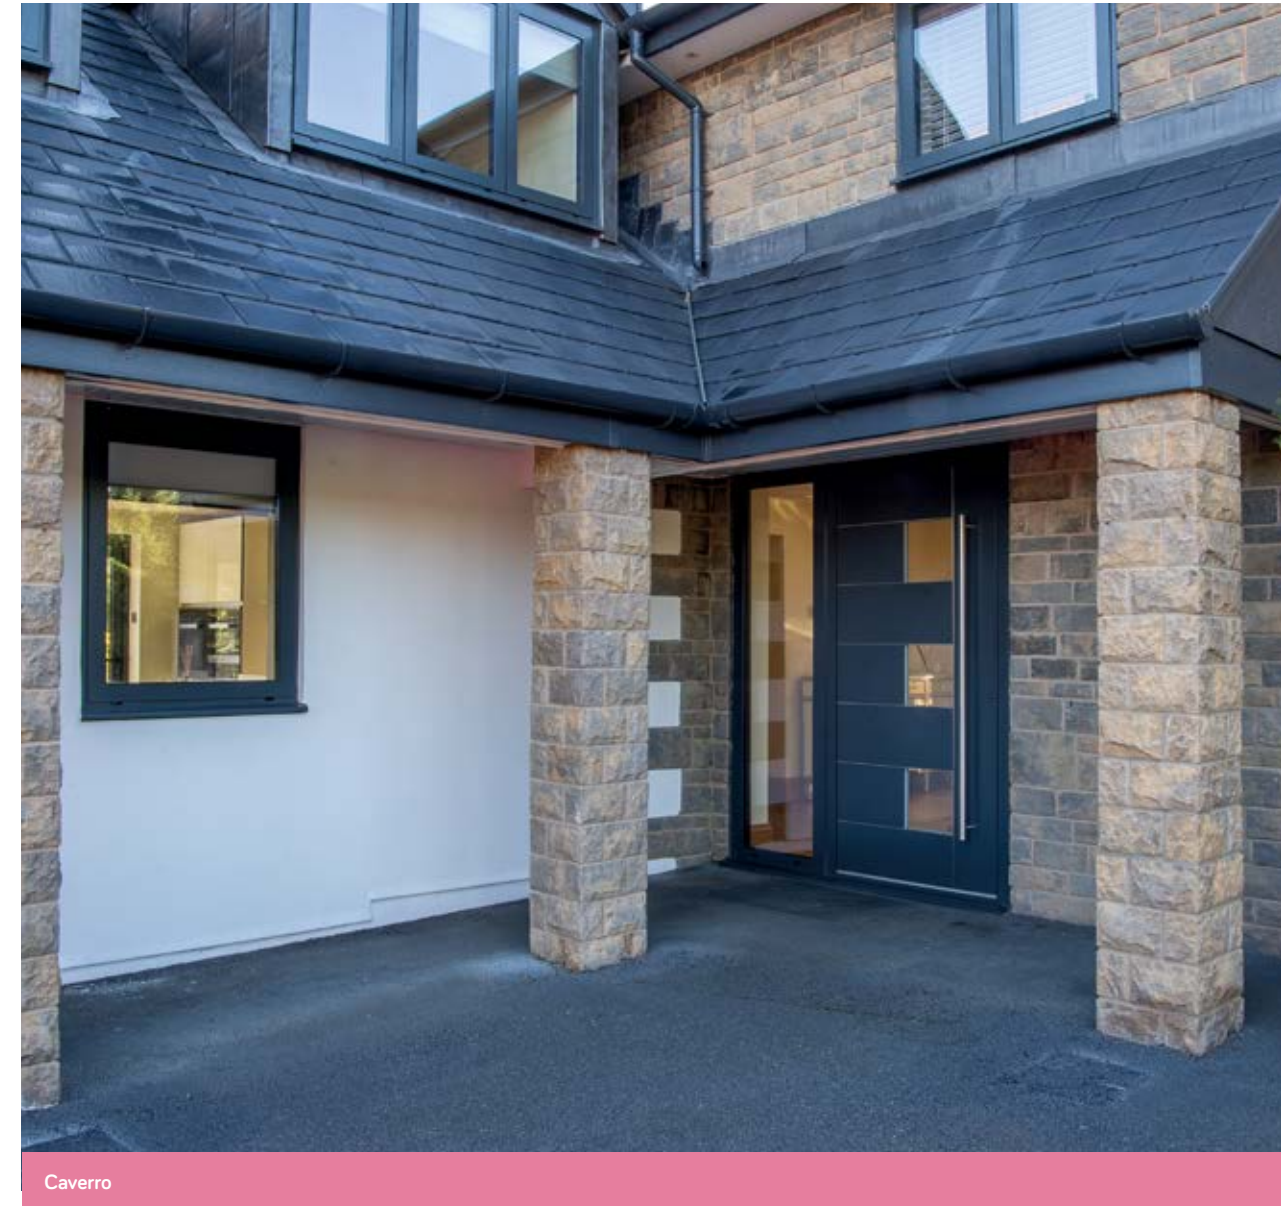

Manufactured using the same bonding methods as our Premium range, our new pivot doors push the boundaries that bit further. Rather than traditional door hinges, the doors pivot thanks to an innovative off-centre rotation axis that not only adds a dramatic effect when opening the door but also aligns with the modern architectural demand for standout features. Available in a range of contemporary styles at huge widths and heights, our pivot doors will add a statement entrance to any property.

XP77 Entrance Doors

Faster lead times and a more competitive price are two advantages our XP77 doors have when compared to our Premium range, and the ability to make wider and taller doors is the advantage when compared to the Signature doors. The doors are manufactured to the same exacting standards and offer many of the same benefits, but rather than the panel being bonded to the sash we glaze the panel into the door. Boasting eight distinct panel designs and available in any RAL colour, our XP77 range can really set the tone as the perfect entrance to your home.

Smarts Signature Doors

Uniquely for us, we do not manufacture this range of entrance doors. The doors are manufactured by Smarts in Yatton, but such is the quality of the product and the value for money we are happy to offer this cost-effective range to our customers. Available in a range of styles and with a huge choice of customisation options, the Smarts Signature Doors are a top quality product with a modest price tag.

Premium Entrance Doors Opening inwards

PREMIUM ENTRANCE DOORS

All our doors are expertly manufactured to the same standard. We manufacture the aluminium front door and then double bond the 77mm deep panel to the door.

The door boasts a completely flush finish on both the external and internal face of the door. The double skin panel solidifies the door and adds to its premium look and feel.

Our premium range of entrance doors are Secured by Design accredited for extra piece of mind.

Letterboxes

Letterbox available with the Dicoma, Liseo and Sila doors. Letterbox available in stainless steel only.

Glass

Laminated sandblast glass is offered as standard but clear glass for glazed inserts is available.

Hinges

We offer fully concealed hinges as standard on all our Premium entrance doors.

Door Handles

Liseo is available with a vertical handle instead of horizontal if requested.

The various steel feature handles displayed on the doors exterior can be used on any of the door designs that don't have a built-in handle.

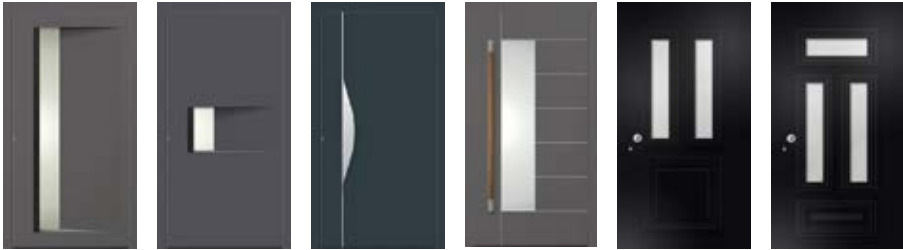

The feature handle trim on the Sila and Tira doors are available in black or silver anodized.

BEAUTIFULLY CONTEMPORARY

We have widened the range of our Premium entrance doors to allow you even more flexibility as you look to create the perfect entrance to your dream home. Our Premium entrance doors are both bold and distinctive, so we have created a warmer natural option whilst retaining the contemporary aesthetic afforded across our entrance door range.

Natural Oak Finish

Our Natural Oak finishes are available in two very popular finishes, Oak Concrete and Oak Malt, plus two additional options in Oak Alpine and Oak Nature. This stunning smooth finish adds both warmth and depth to our entrance doors – a natural finish that is available across our range of styles to create a truly special entrance door. The door’s outerframe and any adjacent windows can be powder coated to any RAL colour whilst the flush door panel appears like a solid wooden door, creating a feature both internally and externally with a contemporary timber door sat alongside our aluminium windows.

Steel and Concrete Finishes

Our Corten finish is a form of weathered steel which is designed to develop a stable, rust-like layer that offers a real standout look, particularly when used instead of paint. Beton is a form of concrete and is yet another finish that can add a real ‘industrial’ elegance to your home.

Corten

Liseo in Oak Concrete with Textured Black indents & HA284 feature handle

Textured black indents and feature handles

A quality product is all about the detail and the detailed finish that characterises our designs is now available with textured black inlays instead of stainless steel. Black is a top trend for both interior furniture and external door furnishings, so our black finishing detail adds even more choice across our Premium door range.

The indents feature more heavily in light coloured doors compared to our steel equivalents and they work particularly well when combined with our natural oak finishes and black door outer frames.

Premium Door Size Limitations

The maximum size for our single panel Premium entrance doors is 1200mm x 2550mm, we can of course offer sidelights and top lights for wider openings as well as a French door opening configuration for the most grand of entrance doors.

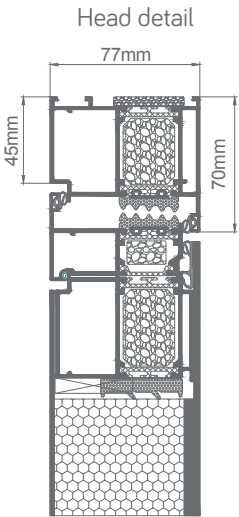

Due to the distinctive design elements of our Premium entrance doors there are minimum sizes that we can offer.

PIVOT DOORS

We expertly manufacture the aluminium pivot door and then double bond the 77mm panel to the door. The result is a stunning pivot door that is available glazed or in a unique style, all of which are designed to create a real stand-out entrance feature to any property.

Because the pivot action does not have a rebate to close against, the wind loading isn't as good as our traditional opening doors. For this reason we recommend having the pivot doors set back and protected by an external overhang like a veranda or canopy. Incorporating this into the frontal design of any property brings the benefit of a statement entrance door with proper UK weather protection.

XP77 ENTRANCE DOORS

The more cost-effective XP77 range is manufactured to the same exacting standards as our premium range. We manufacture the aluminium door but rather than bonding the panel to the sash we use a 40mm glazed in panel to create designer front doors that look great, whilst offering superb security features and thermal performance.

Boasting seven-point locking, bespoke sizes, huge colour choices and Secured by Design accreditation, our XP77 front entrance doors will create a statement entrance to any home.

Glass
Laminated sandblast glass is offered as standard but clear glass for glazed inserts is available.

Hinges
Hinges are available in black and brushed chrome.

Door Panels
The distinctive door panels are glazed into the door. We can also offer glazed entrance doors with a steel feature handle instead of the distinctive panels on request.

Door Handles
Externally we offer three feature steel handles: Pole, Oval and Curved. These three handles are available on any door design. Standard lever handles are available instead of the stainless steel feature handles, lever handles are available in stainless steel, black, white and brushed chrome. The lever handle means that the door can be operated with the handle rather than the turn of a key.

INTERNAL LEVER HANDLES
(available externally on request)

We offer two ranges of internal handles. Our Purity curved steel handle is offered as standard. We also offer a contemporary, baseless lever handle that is available in five colours

FIND YOUR COLOUR

Our products are a great way to bring your personal style into your home and can be coloured to show off your taste and to complement your interior space. With hundreds of colours to choose from, you can match your aluminium windows and doors to your worktops, furniture or make your front door pop by opting from a completely different feature colour. Pick from over 200 RAL colours or push the boundaries further with our Premium entrance doors, which are available in a wider range of finishes including the unique textured and metallic finishes with our exclusive Essence & Elite colour range, plus natural wood finishes.

And because our products are powder-coated, durability is never an issue. The colour is baked-on, providing a lasting finish that won't peel off or lose its shade – and is guaranteed for 10 years. For more details on our colour options, please contact our sales team or visit our website to find your perfect choice.

Huge choice of 200 RAL colours

View our colour ranges in one of our showrooms

The distinctive appearance of our entrance doors lends itself to a bold selection when it comes to colour choice. The vast choice of colours allows you to make a real feature to the entrance of your home. You can choose a stand-alone RAL colour or opt for a textured Elite finish to draw the focus to your home's entrance to create a statement feature when welcoming friends and family inside.

Wood and raw finishes available on our Premium doors

CASE STUDY – THE SPINNEY

ATRIUM ENTRANCE WAYS

The entrance to this property is a well-designed focal point that gives a clear indication as to what awaits once you step inside this wonderful property. Our Premium Bentano entrance door sits centrally within a curtain wall screen that spans almost five metres in height. The shaped atrium window sits directly under the roof ridge which has created a high and vaulted ceiling internally, allowing for hanging pendants, which look stunning when viewed from the outside.

Our Premium entrance doors are solid and strong, making them an imposing feature both inside and outside of the home and perfectly suited to housing with curtain walling to create a dramatic entrance atrium. Once inside, the entrance atrium mirrors the glass sliding doors on the opposite elevation, which floods the hallways with natural light from both the front and rear elevations of the property.

CASE STUDY – SCALABOR PARK

A GRAND ENTRANCE

The owners of this new build tasked us with putting their own stamp on the property by replacing some of the existing products to add a contemporary look to the front. We achieved this with a new front door and a glazed atrium linking the front and back of the house. The atrium also acts as a light-filled gateway connecting the main house to the garage, transforming the rear of the home into a light-filled open-plan space.

The single glazed door within the glazed atrium is a very unique structure to place within a home. The glazed atrium on its own is a stunning architectural feature that bathes the property in natural light. The door creates a second entrance to the home, which leads straight through to the open-plan kitchen and living area, or out to the garage. It is effectively a glass wall, so will help keep both the second entrance and rear kitchen/living area warm. Using glass instead of a traditional stud wall has prevented both spaces from being closed off. Instead they're expansive, which, along with the bi-folding doors and casement windows, will make the space feel bigger and lighter.

CASE STUDY – MOTEHILL

BEAUTIFULLY MODERN

This modern home in Glasgow has been finished to the highest standard. The customers wanted a solid front door but used a sidelight to allow in some light internally. To help give a modern touch they used obscure glazing with four stripes, which line up with the indents of the front door for an extra crisp appearance. The solid front door sits beautifully alongside our casement windows and modern grey cladding to create an impeccable and distinctive looking home.

CASE STUDY – STATION LANE

A MODERN TWIST

These homeowners wanted to create a dramatic entrance to this stone built home. They opted for our distinctive Numira front door with the house number etched in the glass. The door is Secured by Design as standard and contains the same key as the rest of the doors in the house. Externally it is grey to match the windows, but white on the interior. The glazed insert within the door improves the internal aesthetic as it breaks up the solidity of the door and allows in daylight. The stylish front door combined with modern cedar cladding has added a real modern twist to this traditional looking home.

CASE STUDY – FELINWEN

AN IMPRESSIVE FRONT ELEVATION

All the elevations of this home are dominated by our glazing products and all the interior rooms benefit from them also but the front elevation perfectly sets the tone to this newly built home. Clean lines and thin aluminium frames were the perfect combination for this superbly constructed property. The ground floor boasts slim framed aluminium casement windows sat neatly against the cream house render. The Premium Entrance door in our Linora design is flanked by two sidelights sitting below a large structural steel.

The glazed entrance atrium then runs all the way up to the roof ridge, two additional windows separated by another structural steel are all blended with external and internal aluminium pressings to create the appearance of one large window running from top to bottom.

This theme continues with the remaining upper floor windows. Large format shaped windows are positioned either side of the entrance atrium again two windows fixed top and bottom of a structural steel. A unique shaped apex window completes the expansive glazing on the front elevation. All the elevations of this home are dominated by our glazing products and all the interior rooms benefit from them also.

CASE STUDY – JOHN AMABILE

OUT WITH THE OLD & IN WITH THE NEW

Interior designer and TV presenter John Amabile has grown to become a friend of Express. We first crossed paths at the Ideal Home Show Scotland where John visited our stand to have a look at our products and to discuss the plans for his own home. Since meeting several years ago, we have worked with John on numerous projects including three separate orders as he has renovated and improved his own home.

The renovations began in 2015 with the installation of two XP View bi-folding doors and concluded for now in 2019 with the installation of a large XP Glide sliding door. In between these projects and following a visit to our showroom in Glasgow John also decided to replace his existing front door with a modern and stylish product. Choosing the Caverro design from our Premium range of entrance doors the inside and outside of the house was instantly modernised with the secure front door complete with glass inserts and steel feature inlays.

This project is a great example of the long-lasting relationships we can form with our clients. Often one small project leads to another as we work together to create the perfect forever home. A simple bi-folding door installation bought so many benefits that it directly led to enhancements in other parts of the house. The result is a stylish and sociable home that can be adapted throughout the year to suit the seasons, whether it be snug and cosy during the long nights or bright, vibrant, and airy throughout the long spring and summer days.

CASE STUDY – THE BIRCHES

AN INSTAGRAMABLE RENOVATION

The owners of this semi-detached home in York wanted to extend their home whilst renovating and carrying out improvements throughout the whole house. They had plans drawn up for the rear extension and renovated throughout including updating the windows and doors in the rest of the house, with the aim of modernising the home without losing any of its character.

A Linora Premium entrance door is a bold addition to this front of the property, its modern and solid appearance is a complete contrast to the rest of the house front. The Elite finish in 9007 is a contemporary grey with a deep texture that adds to the door's premium look and feel. One look and feel of the door tells you it meets the strictest security requirements and it adds a statement feel to this otherwise traditional front elevation.

The design of the house from front to back and inside to outside is of the highest standard and you can see more details on this renovation including the before and progress pictures on Instagram via their Instagram home account named 'rugrats.and.renovation'. The home account gives a fascinating insight into the various stages of a project like this as well as welcome feedback from the owners now that the project is complete: 'We can't tell you how fabulous open plan living is. I wish we would have knocked down the wall between the kitchen and the dining room years ago.' 'We have created the space we dreamed of.'

CASE STUDY – CROSSFORD

A RIVERSIDE FEATURE

We offered our expert advice throughout each stage of this riverside project. Slim framed windows with maximum glass areas were a fundamental requirement throughout, so the whole house from front to back benefits from large format picture windows. The gable shaped side of the house contains numerous shaped windows, which ensure that natural light is truly maximised in several of the home's key rooms including the kitchen, living area and entrance way, plus the first floor and master bedroom. Internal plasterwork and external tiles sit against our slim aluminium windows creating minimal sightlines and clean lines throughout the property.

The dramatic feature entrance is very much in keeping with the rest of the property. A large, shaped window and two slim-line sidelights surround a distinctive feature entrance door. The Arola design is from our Premium range of front doors, three glass inserts are separated by woodgrain feature inlays that soften and warm the appearance of the door.

A dominant glazed entrance is a popular feature in today's luxury homes. Our solid entrance doors offer the piece of mind of strength and security, whilst the adjacent glazing pours light into the interior making it feel lighter and larger as you enter the property.

CASE STUDY – BEEHCROFT, BROXBOURNE

GENUINE KERBSIDE APPEAL

This beautiful new build home has been expertly designed from front to back and inside to out. The home's riverside position on the outskirts of London lends itself perfectly to inside, outside living and by exploring this project online you will see how this has been wonderfully achieved in the rear of the property. The front of the home is picture-perfect, a mixture of materials that sit harmoniously alongside one another to create a contemporary front elevation that immediately sets the tone for the high specification designs and finishing details that await once entering this home.

A huge entrance atrium manufactured from our specialist curtain-walling is the main feature as you first look at the house. The superbly designed garage, slim aluminium

windows and paved driveway all contribute to the wonderful aesthetic of this home which is capped off by our Premium entrance door that is installed between two slim sidelights, whilst expertly lining through with the glass entrance atrium above.

The entrance door is our popular Bentano design, a solid and strong looking door that is perfect for positioning alongside glass sidelights and atriums such as this installation into this luxury home. The Bentano boasts a discreet indented handle that forms the feature of the design as well as subtle indents on the interior face of the door panel also. The RAL colour is 9007 silver grey, which complements both the clean render and modern brickwork perfectly.

ELEVATED LIVING

The full range of our Premium & XP77 entrance doors can be combined with our complete product range to stunning effect.

The entrance to any home is often the focal point for home design, letting you create the perfect impression for passers-by who can see your home from its roadside position. This makes opting for a well-planned and thought-out entrance a must, whether you're looking for traditional or contemporary, if you want your interiors light and bright, or want to welcome friends and family into your warm, safe and secure home. Our entrance doors can really set the tone for guests entering your home. Their strong and solid design makes them the ideal product to create a grand entrance, and when combined with our windows, shaped frames, sidelights, top lights, or curtain-walling options, they can create a glazed entrance atrium that looks stunning – both inside and outside of the property. A statement entrance to your home with quality, British-made doors that are as unique as you are.

SMART LOCKING AVAILABLE ACROSS OUR RANGE OF ENTRANCE DOORS

We've partnered with lock specialist Ultion to offer smart locking and operation across our full range of entrance doors. The Ultion Nuki plus lock and app allows you to lock and unlock your door from your phone or home automation system, along with optional keypad and fingerprint entry also.

We can supply your doors with full smart lock operation or they can be easily retro-fitted should you decide to incorporate smart locking to your doors at a later date.

Wireless fingerprint and keypad access is simple to install and works within a ten metre radius of the lock, meaning it doesn't need to be installed within the direct vicinity of your entrance door. The keypad can store up to 100 different fingerprints so various family and friends can have access should you wish. Fingerprints can be easily programmable via the Nuki APP and the 6-digit keypad code can be set up and changed via the Nuki APP also.

ULTION NUKI PLUS BENEFITS:

- Control your door lock from your phone
- Auto-unlock on your door on approach
- Send electronic guest keys
- Built-in bridge for remote access
- Can be controlled by various apps including Alexa, Google Home, & Ring doorbell
- Can be retro fitted and working within minutes
